Captured sparse spectral size versus compact dense spectrum
Captured TSP1 spectral bytes (decimal MB)
3,241,080
13.45% larger
Compact dense spectral baseline: 2,856,952 bytes
523,200
81.69% smaller
410,192
85.64% smaller
318,360
88.86% smaller
237,232
91.70% smaller

Spectral threshold T
3,001 frames per capture. Baseline = 952 bytes/frame. These are spectral representation sizes, not WAV compression ratios.
