UVM test and environment
configuration, phases, objections
Sequence / sequencer
epoch configuration
seeded schedules
Driver + virtual interface
PCM, reset, start
output backpressure
Unchanged TSH2 RTL
FFT / threshold / IFFT
Y and spectral export
Admitted fixtures
independent reference
immutable expected outputs
Analysis-port scoreboard
exact values and ordering
observed event counts
Passive monitor
accepted transfers
held data and completion
Result gate: complete comparisons, required events, clean reports, bounded completion
